

Good morning Jonathan – please be advised that Enbridge Gas is further reviewing all of our requirements before proceeding any further with this development.

Ensure that NO construction activity takes place within the easement parameters of our high-pressure 12" lateral 6895 kPa gas main until advised by Enbridge Gas directly.

This development to proceed must be submitted through GetConnected. Typically, this is submitted by the consulting firm assigned to this project. If any assistance is required for the submission, please let me know and I will provide added documentation support.

Regards,

Karen Trudel
